1 Introduction

Deep learning has transformed scientific discovery across many domains.

Prior work studies transfer learning and representation quality.

$$\mathcal{L}(\theta) = \frac{1}{N}\sum_{i=1}^{N}(y_i - f_\theta(x_i))^2 + \lambda \|\theta\|_2^2$$

Method	Accuracy	F1
Baseline	0.812	0.804
Ours	0.897	0.891

Table 1: Comparison of results on the benchmark.

2 Method

We optimize the objective above with stochastic gradient descent.
